UAT Checks | Fleet Maintenance Tracker

Portfolio simulation | Version 1.0 | 14 October 2026

Test basis

Local Excel workbook, Power Query dashboard and Power Automate Desktop flow. Results below refer to the current 10-record simulated dataset.

Test cases

ID	Check	Expected result	Outcome
UAT-01	Read work orders	10 records, without blank rows	Pass
UAT-02	Overdue count	7 overdue	Pass
UAT-03	Pending approval count	1 pending	Pass
UAT-04	Display summary	Shows 10 / 7 / 1	Pass
UAT-05	Write report	Saved file shows 10 / 7 / 1	Pass
UAT-06	Independent IF checks	Both checks inside For Each	Structure checked; edge case not run
UAT-07	Dashboard comparison	Summary aligns with sample	Visual check only
UAT-08	Zero-exception cases	Counts return zero as appropriate	Not run
UAT-09	Additional records	New rows included in read range	Not run

Evidence and follow-up

The corrected flow was run successfully and the summary text file was inspected. Dashboard and flow screenshots are available in the repository.

Before extending the tracker, test a non-overdue record with Pending approval and confirm that adding rows does not require manually changing the Excel read range.

Test boundary

These are portfolio validation checks on simulated data, not formal business-user sign-off.
